

## UNIFILL AT INTERPACK 2008 – HALL 8b, BOOTH G39

**INTERPACK**, the most important packaging show in the world, is only a few weeks away and, as it always happens, this is a crucial period for us at **UNIFILL**. The reason for such a frantic atmosphere is simple: although for three decades we have been **the unchallenged leaders in the production of machines for unit doses**, we never gave up our quest for innovation and still invest most of our resources in technology research. And the result are there to prove it: **7 new machines designed and launched in 6 years !**

If the last two editions of the Düsseldorf show clearly marked significant steps in the life of Unifill -in 2001 the launch of the TF-01 and the RESNOVA, in 2005 the launch of the TF-02 (already a best seller with 25 units sold world wide in 30 months)- the incoming edition will undoubtedly represent a milestone in the history of our Company: UNIFILL will in fact be presenting **two new machines** meant to extend our equipment range in key market segments: the **price-sensitive applications** on one side and the **large capacity containers** on the other.

These ambitious projects are the result of exhaustive R&D programmes and of accurate market researches that were in some cases carried out in co-operation with top-class global partners.

In details, UNIFILL will be presenting:

**The TF-400**, a unique machine for Unifill-type containers with volumes up to 400ml, speeds up to 200 units/minute and the possibility to use soft or rigid plastic materials. Thanks to its modular concept, the machine can be set up to either produce finished “filled & capped” containers or empty spouted containers ready for being filled and capped on conventional lines.

**The TF-K**, a small, compact machine designed for particularly price-sensitive applications as well as for limited output requirements. While the TF-K clearly benefits from the innovative features that are typical of all Unifill machines, a special care was put by the designers to make sure that the TFK could finally make the Unifill technology widely accessible.

The **UNIFILL TEAM** really looks forward to seeing you there ! Should you wish to book a meeting at our booth or simply request some more information, please feel free to do so through the “Contact” section of our website or by email at [sales.dept@unifill.it](mailto:sales.dept@unifill.it)

Kindest regards,

Alberto Ninni
